SECTI	ION 4 : FIRST AID	MEASURES					
4.1	# Sy see	medical attention. Never give anything by mouth to an i	rect exposure to the product, when in doubt, or when symptoi unconscious person. Lifeguards should pay attention to self-pi possibility of exposure. Wear protective gloves when admini	otection			
	Route of exposure	Symptoms and effects, acute and delayed	Description of first-aid measures				
	Inhalation:	# Inhalation produces irritation to mucus, cou and breathlessness.	ghing # Remove the patient out of the cont fresh air. If breathing is irregular or s artificial respiration. If the person is appropriate recovery position. Keep i rest until medical attention arrives.	tops, administer unconscious, place in			
	Skin:	# Skin contact causes redness.	# Remove immediately contaminate thoroughly the affected area with ple water and neutral soap, or use a suit not use solvents or thinners. In the c or rashes, contact a doctor immedia	nty of cold or lukewarm able skin cleanser. Do ase of skin reddening			
	Eves:	# Contact with the eyes produces redness and	d pain. # Remove contact lenses. Rinse eye with plenty of clean, fresh water for a holding the eyelids apart, until the irr a physician immediately.	t least 15 minutes,			
	Ingestion:	# If swallowed, may cause irritation of the mo throat and oesophagus.	outh, # If swallowed, seek immediate med induce vomiting, due to the risk of as patient at rest.				
4.2	MOST IMPORTANT	SYMPTOMS AND EFFECTS, BOTH ACUTE AND DELAYER ns and effects are indicated in sections 4.1 and 11.1	<u>D:</u>				
4.3	INDICATION OF ANY IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT NEEDED: Notes to physician: # Treatment should be directed at the control of symptoms and the clinical condition of the patient. Antidotes and contraindications: # Specific antidote not known.						
SECTI	ION 5 : FIRE-FIGH	TING MEASURES					
5.1	EXTINGUISHING # In case of fire, u	M <u>EDIA:</u> se water spray, alcohol-resistant foam, dry chemical pow	wder, carbon dioxide, AFFF.				
5.2	SPECIAL HAZARDS ARISING FROM THE SUBSTANCE OR MIXTURE: # Fire can produce a dense black smoke. As consequence of combustion or thermal decomposition, hazardous products may be produced: carbon monoxide, carbon dioxide, nitrogen oxides, isocyanate vapours, traces of hydrocyanic acid. Exposure to combustion or decomposition products may be a hazard to health.						
5.3	ADVICE FOR FIREFIGHTERS: Special protective equipment: # Depending on magnitude of fire, heat-proof protective clothing may be required, appropriate independent breathing apparatus, gloves, protective glasses or face masks and boots. If the fire-proof protective equipment is not available or is not being used, combat fire from a sheltered position or from a safe distance. The standard EN469 provides a basic level of protection for chemical incidents. Other recommendations: # Cool with water the tanks, cisterns or containers close to sources of heat or fire. Bear in mind the direction of the wind. Do not allow fire-fighting residue to enter drains, sewers or water courses.						
SECTI	ON 6 : ACCIDENT	AL RELEASE MEASURES					
6.1	PERSONAL PRECA	UTIONS, PROTECTIVE EQUIPMENT AND EMERGENCY PR	ROCEDURES: e area. Do not smoke. Avoid direct contact with this product				
6.2	# Eliminate possible sources of ignition and when appropriate, ventilate the area. Do not smoke. Avoid direct contact with this product. ENVIRONMENTAL RECAUITONS: # Avoid contamination of drains, surface or subterranean water and soil. In the case of large scale spills or when the product contaminates lakes, rivers or sewages, inform the appropriate authorities in accordance with local regulations.						
6.3		ATERIAL FOR CONTAINMENT AND CLEANING UP:	- arth, sand, vermiculite, diatomaceous earth, etc). The contar				
0.5	area should be clear isopropanol and co up of water and so	aned up immediately with a suitable decontaminant. One ncentrated ammonia solution $(d=0,880) = 45/50/5$ parts	e possible (flammable) decontaminant comprises: water, eth s by volume. Another possible (non-flammable) decontaminar lecontaminant to any residues and allow to stand for several c	anol or t is made

NEUCE Endurecedor Neucetop PA 141 O FUTURO DA TINTA Code: 50268000 7.3 SPECIFIC FND LISES # For the use of this product do not exist particular recommendations apart from that already indicated. SECTION 8 : EXPOSURE CONTROLS/PERSONAL PROTECTION 8.1 CONTROL PARAMETERS: # If a product contains ingredients with exposure limits, may be necessary a personnel monitoring, work place or biological, to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment. Reference should be made to EN689, EN14042 and EN482 standard concerning methods for assesing the exposure by inhalation to chemical agents, and exposure to chemical and biological agents. Reference should be also made to national guidance documents for methods for the determination of dangerous substances. OCCUPATIONAL EXPOSURE LIMIT VALUES (TLV) **AGCIH 2018** TLV-TWA TL<u>V-STEL</u> Remarks Year mg/m3 mg/m3 ppr ppm Xvlene 1996 100. 434. 150. 651. A4, BEI n-butyl acetate 2015 50. 237. 150. 713. Ethylbenzene 2002 100. 434. 125. 543. A3 . BFT 550. 2-methoxy-1-methylethyl acetate 50. 275. 100. Recommended Skin TLV - Threshold Limit Value, TWA - Time Weighted Average, STEL - Short Term Exposure Limit. Skin - Danger of cutaneous absorption. A3 - Carcinogenic in animals. A4 - Non classified as carcinogenic in humans. BEI - Biological exposure index (biological monitoring). Dermal (Vd): # Means that, in exposures to this substance, the contribution by the cutaneous route, including the mucous membranes and eyes, may result significant for the overall body content if no measures are taken to prevent absorption. There are some chemicals for which dermal absorption, both in liquid and vapour phases, can be very high, and this route of entry may be or equal or greater importance even that inhalation pathway. In these situations, the use of a biological control is essential in order to quantify the overall amount of contaminant absorbed. **BIOLOGICAL LIMIT VALUES** This preparation contains the following substances that have established a biological limit value : # Xylenes (technical or commercial grade) (2011): Biological determinant: methylhippuric acids in urine, BEI: 1.5 g/g creatinine, Sampling time: end of shift (2). # Ethylbenzene (2013): Biological determinant: sum of mandelic acid and phenylglycolic acid in urine, BEI: 0.15 g/g creatinine Sampling time: end of shift (2), Notation: (Ns). # (2) When the end of the exposition not coincide with the end of the working day, the sample will be taken as soon as possible after the real exposition ceases # (Ns) Non-specific. The determinant is non-specific, since it is also observed after exposure to other chemicals. DERIVED NO-EFFECT LEVEL (DNEL) Derived no-effect level (DNEL) is a level of exposure that is considered safe, derived from toxicity data according to specific guidances included in REACH. DNEL values may differ from a occupational exposure limit (OEL) for the same chemical. OEL values may come recommended by a particular company, a government regulatory agency or an organization of experts. Although considered protective of health, the OEL values are derived by a process different of REACH. DNEL Cutaneous Derived no-effect level, workers **DNEL Inhalation DNEL** Oral Systemic effects, acute and chronic: mg/m3 mg/kg bw/d mg/kg bw/d 289. Xylene (mixture of isomers) 77.0 (c) s/r (a) 180. EXPOSURE COI	VTROLS:						
ENGINEERING	MEASURES:						
*	 Provide adequate ventilation. Where reasonably practicable, this should be achieved by the use of local exhaust ventilation and good general extraction. If these measures are not sufficient to maintain concentrations of particulates and vapours below the Occupational Exposure Limits, suitable respiratory protection must be worn. 						
Protection of ey Protection of ha	spiratory system: # Avoid the inhalation of product. es and face: # It is recommended to install emergency eye baths close to the working area. nds and skin: # It is recommended to install emergency showers close to the working area. Barrier creams may help to protect the of the skin. Barrier creams should not be applied once exposure has occurred.						
As a general me the correspondi	<u>L EXPOSURE CONTROLS:</u> Regulation (EU) No. 2016/425: assure on prevention and safety in the work place, we recommend the use of a basic personal protection equipment (PPE), with ng marking. For more information on personal protective equipment (storage, use, cleaning maint enance, type and of the PPE, protection class, marking, category, CEN norm, etc), you should consult the informative brochures provided by the of PPE.						
Mask:	 # In order to obtain a suitable protection level, the filter class must be selected depending on the type and concentration of the contaminating agents present, in accordance with the specifications supplied by the filter producers. If the working area is insufficiently ventilated, or when operators, whether spraying or not, are inside the spraybooth, compressed air-fed respiratory protective equipment (EN137) is required. For short periods of work, you can consider the utilisation of a combination mask with gas and particle filters, type A2-P2 (EN14387/EN143). 						
Safety goggles:	# Safety goggles with suitable lateral protection (EN166). Clean daily and disinfect at regular intervals in accordance with the instructions of the manufacturer.						
Face shield:	# No.						
Gloves:	 # Gloves resistant against chemicals (EN374). When repeated or prolonged contact with the product is expected, gloves of protection level 5 or higher should be used, with a breakthrough time of >240 min.When short contact with the product is expected, use gloves with a protection level 2 or higher should be used, with a breakthrough time >30 min.The breakthrough time of the selected glove material should be in accordance with the pretended period of use. There are several factors (for example, temperature), they do in practice the period of use of a protective gloves resistant against chemicals is clearly lower than the established standard EN374. Due to the wide variety of circumstances and possibilities, the instructions/specifications provided by the glove supplier should be taken into account.Use the proper technique of removing gloves (without touching glove's outer surface) to avoid contact of the product with the skin. The gloves should be immediately replaced when any sign of degradation is noted. 						
Boots:	# No.						
Apron:	# No.						
Clothing:	# It is advisable personnel wear antistatic clothing made of natural fibre or high temperature resistant synthetic fibre.						
Thermal hazard	s: e (the product is handled at room temperature).						
ENVIRONMENT	AL EXPOSURE CONTROLS: Illage in the environment.						
Spills on the so	Spills on the soil: # Prevent contamination of soil.						
- Water Manag	Spills in water: # Do not allow to escape into drains, sewers or water courses. - Water Management Act: # This product does not contain any substance included in the list of priority substances in the field of water policy under Directive 2000/60/EC~2013/39/EU.						
Emissions to th	e atmosphere: # Not applicable.

The data for the product specifications can be found in the corresponding technical data sheet. For additional information concerning physical and chemical properties related to safety and environment, see sections 7 and 12. SECTION 10 : STABILITY AND REACTIVITY 10.1 REACTIVITY: Corrosivity to metals: # It is not corrosive to metals. Pyrophorical properties: # It is not pyrophoric. CHEMICAL STABILITY: 10.2 # Stable under recommended storage and handling conditions. 10.3 POSSIBILITY OF HAZARDOUS REACTIONS: # Possible dangerous reaction with water, oxidizing agents, acids, alkalis, amines, alcohols, peroxides. Exothermic reaction with amines and alcohols. Reacts with water under evolution of CO2. 10.4 CONDITIONS TO AVOID: Heat: # Keep away from sources of heat. Light: # If possible, avoid direct contact with sunlight. Air: # The product is not affected by exposure to air, but should not be left the containers open. Humidity: # Avoid humidity. Precautions should be taken to minimise exposure to atmospheric humidity or water, as carbon dioxide may be formed which, in closed containers can result in pressurisation. Pressure: # Not relevant. <u>Shock:</u> # The product is not sensitive to shocks, but as a recommendation of a general nature should be avoided bumps and rough handling to avoid dents and breakage of packaging, especially when the product is handled in large quantities, and during loading and download operations. 10.5 INCOMPATIBLE MATERIALS: # Keep away from water, oxidizing agents, acids, alkalis, amines, alcohols, peroxides. Clean the application equipment with a compatible solvent. Never leave the equipment filled with the cleaning solvent for prolonged periods, especially when used for cleaning solvents recovered which may contain moisture or alcohols, to prevent the product from hardening in the equipment, causing seals on the hoses or guns.

10.6 HAZARDOUS DECOMPOSITION PRODUCTS:

As consequence of thermal decomposition, hazardous products may be produced, including isocyanates.

The information of this Safety Data Sheet, is based on the present state of knowledge and on current UE and national laws, as the users' working conditions are beyond our knowledge and control. The product is not to be used for other purposes than those specified, without first obtaining written handling instruction. It is always the responsibility of the user to take all necessary steps in order to fulfil the demand laid down in the local rules and legislation. The information in this Safety Data Sheet is meant as a description of the safety requirements of the product and it is not to be considered as a guarantee of the product's properties.
